Abstract (en)

[origin: US2011139194A1] A dishwasher is provided, which has a base module; a washing container having a base; an air-guiding channel to generate an air flow; and a sorption drying system for drying items to be washed. The sorption drying system includes a sorption container having reversibly dehydratable sorption material. The sorption container is connected to the washing container by the air-guiding channel. Further, the sorption container is arranged beneath the base of the washing container in a substantially freely-suspended manner such that, for heat protection, the sorption container has a predefined minimum gap distance in relation to neighboring components and/or neighboring parts of the base module.
