Abstract (en)

[origin: US2010023026A1] A reloadable device for deploying fasteners. The device has a handle and at least one actuator. The handle is connected to an elongated hollow housing having distal and proximal ends. The device includes a first cartridge containing at least one fastener releasably connectable to the handle. The fastener has at least two anchors connected together by a non-resilient flexible suture which does not resist deformation under compressible loads. The first cartridge is removable from the handle. The device includes a second cartridge having at least one fastener releasably connectable to the handle after removal of the first cartridge. The second cartridge being insertable into the device from a proximal end thereof.
