Abstract (en)

[origin: WO2010004367A1] The invention concerns the use of a mixture of superoxide dismutase and catalase for preparing a topical composition for treating pruritus caused by external agents, or consecutive to dermatological diseases such as atopic dermatitis, psoriasis, eczema, scarring process, internal diseases or psychic disorders, or alleviating it. The inventive compositions are formulated to obtain all galenical forms conventionally used for applying a topical composition on the skin such as for example gel, milk, cream, lotion, plaster or patch, as powder to be solubilized in water or physiological serum prior to use.
