Abstract (en)

[origin: WO2010010232A1] The invention relates to locking mechanisms of a quick-release locked wall element system to be used in, for instance, exhibitions and offices. By connecting together various kinds of wall element (1, 2, 3a, 3b), various kinds of separations are constructed, as required. The solution according to the present invention is based on loose two-ended inserts (5), which lock into a catch mechanism (6) located in the ends of each element. This is formed of a case (6.1, 16) and a spring-loaded catch (7) located inside it. The catches are opened by a common operating member, for example, a rod (9), which is operated, for example, from the top of the element.
