Abstract (en)
[origin: WO2010016811A2] The invention relates to mounted modular structures which are to be fixed on to the horizontal or vertical surface of a space and can be dismantled, when required, to be constructed again. This modular structure consists of one or more panel components and the fixing parts used in the assembly of these components can be placed repeatedly. The invention, which is to be used as a floor or display wall outdoors or indoors (e.g. in exhibition spaces such as trade fairs, exhibition galleries, in interior design of offices and showrooms), is composed of large sized floor panels, holes that can be provided on these panels and that provide the panels to be used with other exhibition units, and footing element which elevates the connectors, floor panel and the frame forming the substructure.
