Abstract (en)

[origin: EP2319690A2] The device i.e. color box (10), has a transmission arrangement (32) with transmission surface and an application unit e.g. plate cylinder (20), for applying coating mass i.e. color, on the transmission surface. The transmission arrangement comprises a multilayer structure with a flexible adaptation layer. The adaptation layer is laid-out for adaptation of the transmission surface at outline of a surface of a cup-shaped packing (50) to be coated. The transmission arrangement comprises a transmission layer forming the transmission surface. An independent claim is also included for a method for transferring coating mass to a cup-shaped packing.
