Abstract (en)
[origin: EP2319969A1] A knitting method of knitted fabric enabling stitches of front and back knitted fabric parts to be bound while performing bind-off processing without interweaving a knitting yarn of one of the knitted fabric parts with the other knitted fabric part. In a process where the front knitted fabric part held in a front needle bed is knitted using a back yarn feeder located on a side of a back needle bed, and the back knitted fabric part held in the back needle bed is knitted using a front yarn feeder located on a side of the front needle bed, following steps 1 to 3 are performed: [1] a stitch \pm (²) on a stitch μ (³/₄) of the front or back knitted fabric part is newly knitted in a state where the knitting yarns from the front and back yarn feeders are entwined with each other; [2] the stitch \pm as a bind-off stitch is overlapped with a stitch adjacent to the stitch \pm , and the stitch P as a bind-off stitch is overlapped with a stitch adjacent to the stitch ²; and [3] stitches on the double stitches ³, ' are newly formed.
