Abstract (en)

[origin: EP2320013A1] The fitting (10) has a rotatable and tiltable impeller and a connecting rod (11) which is drivable in longitudinal direction of the connecting rod. The connecting rod and a locking element or a fitting part (17) are movably coupled with each other over a coupling element (16) such that a movement of the connecting rod in a direction operates a movement of the locking element in a opposite direction.
