Abstract (en)

[origin: EP2320022A1] The hinge (1) has a protection grid-laterally fixable belt part (2), and a frame-laterally fixable belt part (3) flexibly connected with the grid-laterally fixable belt part. A clamping flange (12) is held in adjustable clamping distance (ak) to the frame-laterally fixable belt part for frame-lateral clamping fixation of the frame-laterally fixable belt part. Guiding brackets (13) are formed at the frame-laterally fixable belt part, and comprise guiding grooves in which a guidance lip (15) is adjustably guided, where the lip is bent right-angled from the clamping flange. An independent claim is also included for a profile frame system comprising a hinge.
