Abstract (en)
[origin: WO2010018086A1] The invention relates to a vacuum cleaner comprising at least one dust chamber (11) for accommodating a dust collection container and comprising at least one receptacle chamber (12) for an air conveying unit (13) comprising a suction opening (15), wherein the dust chamber (11) and the receptacle chamber (12) are separated from one another by a separating wall (14), and wherein the separating wall (14) comprises an outlet opening (18) for an air stream from the dust chamber (11) to the air conveying unit (13). It is proposed that at least one rib (16) be made along the separating wall (14) in the direction toward the suction opening (15) for targeted aiming of the air stream, wherein the at least one rib (16) is aligned along a main flow direction (22) at the separating wall (14).
