Abstract (en)

[origin: EP2153901A1] The device (81) has a control unit (88) for controlling heating/cooling a heating/cooling block (4), and two temperature measuring units (87) i.e. thermostats, attached to an automatic control circuit (82). A test unit (94) performs a test method in the heating/cooling device. The test unit provides a signal connection (95) to one of the temperature measuring units for measuring the temperature in the heating/cooling device, where the operating state of the heating/cooling device is determined based on test factor. An independent claim is also included for a method for testing a test factor of a heating/cooling device.
