Abstract (en)

[origin: WO2009149913A1] For packaging foodstuffs or semi-luxury goods, the invention proposes packaging in which a protective packaging means (21) contains an inner packaging means (11) which contains the material to be packaged. The two packaging means are each produced from a strip (3, 13) by the strip being guided together to form a flexible tube (14). The inner packaging means is connected, in the region of its one end, to the outer packaging means such that, when the outer packaging means, which constitutes a protective packaging means, is torn open, the inner packaging means, rather than being destroyed, remains in the one part of the torn-open protective packaging means. The inner packaging means can preferably consist of a different material to the outer packaging means.
