Abstract (en)
[origin: EP2322056A1] The module has a parallelepiped caisson (11) whose lower face (12) is coupled to a support plate (20) having dimension same as that of the lower face, by a pivot mechanism of a caisson displacing mechanism such that the caisson is mounted free in rotation on the plate around a vertical axis (Z). A guiding unit comprises telescopic slides (22, 23) that are fixed on a lower face of the plate. The slides drive the plate in translation along a horizontal axis (X), in a releasing direction (D), over a displacement length (L) equal to a depth of the caisson. An independent claim is also included for a method for forming a space defined by a partition.
