Abstract (en)
A drawer assembly comprises a drawer and a sliding guide rail system for slidably opening and closing the drawer within an article of furniture. A support bracket (20) for supporting the drawer is provided at each side of the drawer. The sliding guide rail system includes a fixed rail (40) disposed within each of the support brackets. Each side of the drawer assembly has a first member (80 or 90) located at a rear corner of the drawer assembly between the support bracket and the fixed rail, and a second member (90 or 80) located at a forward corner of the drawer assembly between the support bracket and the fixed rail, when the drawer is fully closed. The drawer is guided against skewing by engagement at two diagonally opposing corners, of the support bracket and fixed rail through the first member on one side of the drawer and through the second member on the other side of the drawer.
