Abstract (en)

System for the substitution of color groups or lacquer groups (1-6; 7-12) in a machine (M) for rotogravure printing, wherein a storage device (13) is provided at the machine side, and extends in a direction parallel to longitudinal axis (L) of same machine; said storage comprises stations (13a-13d), which are aligned along said axis and are suitable for housing the respective color groups; are provided with a plurality of guides (41-46) for inserting/extracting said groups, which are arranged in order to allow the color groups to move directly between the storage stations and the machine operating stations; the storage device is also movable in the direction of the machine axis, for aligning color groups to respective insertion/extraction guides.
