Abstract (en)
[origin: EP2322448A1] The bag has a front wall foil (1), a rear wall foil and a folded insertion foil (3) that are connected with each other in edge areas. The insertion foil is connected with side edges (7, 8) of the front wall foil and side edges (9, 10) of the rear wall foil. A folding edge (6) of the insertion foil is terminated into the side edges of the front wall foil and the rear wall foil, where the bag is divided into two chambers by an assembly seam. An edge of the insertion foil is longer than one of the side edges.
