Abstract (en)
[origin: EP2322451A1] The package has a lateral band presenting two longitudinal edges connected by two end edges and presenting a curve and/or a fold to manage a storage space of a food product. A cover comprises a base zone (501) and a cover zone (502) fixed on a distinct longitudinal edge and a side edge zone (503) that is fixed at the end edges of the band so as to lock up the food product in a storage space. The cover is fixed at the end edges, one of the longitudinal edges and a part of the other longitudinal edge in a peeling manner. The package is made of thermofusible materials e.g. polyolefins, polyamides and polyesters, a laminated complex such as sheet of paper or paperboard and thermofusibile material sheet, aluminum, plastic sheet, and an adhesive e.g. thermofusibile resin and heat sealable lacquer. An independent claim is also included for a method for realization of a packager of a food product.
