Abstract (en)  
[origin: EP2322743A1] Parasol-anchoring device of the type fixed to a support surface, which comprises a support element (1) for coupling to a post (2) of a parasol provided with a pendular counterweight (3) that is arranged within a cavity made inside the support surface (7), said pendular counterweight (3) acting by way of stabilizer for the parasol; and in which, between the support element (1) and the support surface (7), there is an intermediate separation element (8) that allows the entire assembly to rock. Said device thus allows firm securing of the support and therefore of the parasol in addition to allowing adaptation of the device to the rocking movement to which the parasol may be subjected when affected by external phenomena, such as the wind.
