Abstract (en)

[origin: DE102009052856B3] The pump (13) has a magnetic clutch provided with a rotor shaft (15) that is rotatably supported by a pump housing (14). The rotor shaft is provided with an impeller or a spindle (16) for conveying fluid from a suction chamber (17) into a pressure chamber (18). A rotor (21) is provided with an inner magnet (22), which is set in rotation over a magnetic field of an outer magnet. The suction chamber and a slit pot (20) are connected with each other over a line (29) by the fluid. The rotor comprises openings distributed along circumferential direction.
