Abstract (en)  
[origin: EP2322884A2] The freezing chamber (A) of this invention, comprises a cooling member (3); a quick freezing compartment (2); at least one intake hole (9) which allows air to flow from cooling member (3) into interior of chamber (1); at least one intake hole (10) which allows cool air to flow from cooling member (3) into the compartment; at least one intake hole (11) which ensures the air flowing out of the compartment (2) to flow into the interior of the chamber (1). The chamber also (A) is characterized in that ; the compartment (2) is enlarged by moving downwards, with the weight of food stuff (14) stored in it and contraction of the compartment (2) by moving upwards and, it comprises one each cover (13) associated with the compartment (2) which closes each intake hole (9) by enlargement of the compartment (2) and opens by the contraction of compartment (2).
