Abstract (en)
[origin: AT506783A4] The furniture part has a railing rod (4) arranged between a back wall and a front aperture. The railing rod is attached to the front aperture via a pivoting adjusting element (5) i.e. adjusting cylinder. The front aperture is inclined by turning the adjusting element. Distances of the adjusting element to the front aperture and to the railing rod are changed during turning the adjusting element. The adjustment element is connected with the front aperture and the railing rod by an outer thread (6a) and an inner thread (6c). The adjusting element is covered by a slidable covering cap (11).
