Abstract (en)
[origin: WO2010004376A1] A device (1) is described for delivering and expelling a capsule (11) for delivering machines for infusion beverages, comprising at least one first fixed part (3) comprising at least one filter-holder chamber (5) and at least one second part (7) moving with respect to such first fixed part (3), such second part (7) comprising supporting means (9) of at least one capsule (11) cooperating with expelling means (13) of such capsule (11) and at least one water-delivering assembly (15), the second part (7) being moving with respect to the first fixed part (3) through actuating means (17) between a first loading position of the capsule (11) onto such supporting means (9), a second position for extracting and delivering such beverage in which such capsule (11) is taken by the second moving part (7) inside the filter- holder chamber (5) and a third position for expelling the capsule (11) from device (1) through the expelling means (13).
