Abstract (en)

[origin: US2011114126A1] A rinsing method for a water-conducting domestic appliance is provided in which rinsing liquid is heated to a first temperature in a first operating mode in at least one partial program step of a first rinse cycle; a scale formation in the water-conducting domestic appliance is recorded by a scale sensor arranged in a hydraulic system; the scale formation is compared with a nominal value for the scale formation; and, upon exceeding the nominal value, a second rinse cycle is executed in a second operating mode, while the rinsing liquid is heated to a second temperature that is higher than the first temperature.
