Abstract (en)
[origin: WO2010027313A1] An aid in the form of a harness for use in health care and geriatric care in connection with walking tables in the form of a structure (1) on wheels (2) with vertically adjustable armrests (3, 4). The harness consists of a band-shaped element (7) with a first (8) and a second (9) end, first attachment means (10, 11) arranged at each end, in the middle section of the band-shaped element mutually spaced second attachment means (15, 16) as well as on the walking table in connection to the armrests arranged attachments (17, 18) for said attachment means (10, 11; 15, 16), whereby the part (13') of the band-shaped element (7) that lies between said second attachment means (15, 16) is arranged to, when the harness has been put on, lie against the small of the back of a user and whereby the parts (12', 14') of the band-shaped element that lie between a first and a second attachment respectively are arranged to, when the harness has been put on, each form a loop which surrounds one of the leg of the user.
