Abstract (en)
[origin: GB2459861A] A device 1 for custom fitting golf putters comprises a putting head assembly 3 having a striking face 19, laser beam generators 13 for generating laser alignment beams AB which project forwardly through and perpendicular to the striking face 19, and a shaft assembly 5 including a grip 63. In a preferred embodiment a pair of spaced laser alignment beams AB is generated with one at each opposing end of the striking face (see fig. 5). The beam generators 13 are preferably removably attached to the putting head via fitting means 23, e.g. screw threads, having through-bores 26 through which the beams AB are projected, with attachment of each beam generator 13 to the respective fitting means 23 operating a switch 47 which actuates the beam generator. An alignment screen (2, fig. 15) may be provided having first and second spaced alignment marks (121, 123, fig. 15) onto which the alignment beams are projected in order to assist in fitting the putter to the player. The putter preferably includes means for adjusting the lie angle and shaft length, with the lie angle being indicated by a lie angle indicator attached to the putting head, e.g. angular scale 11.
