Abstract (en)
[origin: WO2010015418A1] The invention relates to a safety element for a data storage medium (1) comprising a translucent substrate (3) comprising a first partial region (4) having a first color layer and a second partial region (5) having a second color layer that differs from the first color layer, wherein when viewed in incident light the first and the second partial regions form a cohesive overall region and create a substantially identical visual appearance, and wherein when viewed in transmitted light the first partial region creates a brighter visual appearance than the second partial region.
