Abstract (en)
[origin: WO2010027301A1] The invention relates to a lower front panel for a cab-over engine commercial vehicle with a chassis frame and a forward tiltable cab comprising a drivers compartment. The cab is mounted to the frame via a suspension system and via a cab tilting pivot shaft rotatably mounted at the forward end of the frame to allow the cab to be tilted from a normal position of use to an engine service access position. The lower front panel is arranged at the forward end of the chassis frame and an upper front panel is attached to the cab between the chassis frame and a cab windscreen. A panel segment is adapted to follow the tilt angle of the cab when the cab is tilted from a normal position of use to the service access position. The invention also relates to cab-over engine commercial vehicle provided with the above described improved lower front panel.
