Abstract (en)

[origin: CA2738135A1] The invention relates to a cathode for the electrolytic deposition of zinc or the like, which comprises an electrolyte bath, which has a cathode sheet, a supporting and contact bar, which is attached to the upper edge of the plate-like cathode sheet and has a higher stability than the cathode sheet and has edge strips mounted at the lateral edges and possibly at the bottom edge of the cathode sheet. The edge strips are composed of an electrolyte-resistant metal, the electrical conductivity of which is lower than that of cathode sheet.
