Abstract (en)

[origin: WO2010017855A1] The invention relates to a jet regulator or jet aerator (50, 51) having a jet regulator housing (8) which can be inserted into a water outlet and which is releasably held therein by means of a screw or bayonet connection. The jet regulator according to the invention is characterized in that the jet regulator housing (8) has an outflow-side housing partial region (52) which has a reduced housing outer circumference in relation to the inflow-side housing partial region (53), and that the outflow-side housing partial region (52) can be inserted into an insertion opening (53) of a turning tool (54) in such a way that the turning tool (54) can be rotationally fixedly engaged on a tool engagement surface (55) which is provided on the outflow-side end edge and/or on the housing circumference of the outflow-side housing partial region and/or on an annular shoulder (56) which runs around on the outside on the housing partial region (52). The invention also relates to a sanitary water outlet (3, 4, 5, 40, 42) which, for a multiplicity of visibly separately emerging water jets, has a corresponding multiplicity of water outlets (6) which are spaced apart from one another (cf. figure 16).
