Abstract (en)

[origin: WO2010023119A2] The present invention relates to a method for conveying combustion residues (6) in a conveying direction (2) along a conveying path out of a combustion chamber (1), comprising the following steps: a) conveying the combustion residues (6) out of the combustion chamber (1) by means of a conveying device (2) which has at least one housing (4); b) generating a first pressure level (12) in the housing (4); c) after-treating the combustion residues (6) in a treatment device (5) arranged in the conveying path; d) generating a second pressure level (13) downstream of the treatment device (5) in the conveying direction (7) of the combustion residues (6) by introducing a fluid (14) so as to form a pressure gradient.
