Abstract (en)

[origin: WO2010031650A1] The invention relates to a device (1) for operating at least one electrical load (2) which is electrically coupled with an electrical transmission network (3). A control unit (5) which comprises means (6) for detecting a network voltage and/or a network frequency of the transmission network (3) is connected between the electrical load (2) and the transmission network (3), wherein an electrical power consumption of the load (2) from the transmission network (3) can be controlled by means of the control unit (5) according to the detected network voltage and/or network frequency. The invention further relates to a method for operating at least one electrical load (2).
