Abstract (en)
[origin: WO2010025759A1] The invention relates to a method for transmitting control data between a terminal device for telecommunication via a telecommunication network and a server which is connected to the telecommunication network for controlling a service administered by the telecommunication network. According to said method, the telecommunication network provides the data object with a special function, respective databases being associated with the terminal device and the server. The transmission is carried out by first allocating a parameter value for the activation, deactivation or modification of the service to at least one of the control parameters associated with the data object and by saving the data object in one of the two databases together with the control parameter, said database being synchronized with the database.
