Abstract (en)

[origin: WO2010018910A1] The present invention relates to a local broadcasting service providing method and device in a local broadcasting system. The local broadcasting service providing device receives a first main broadcasting signal from a terrestrial digital multimedia broadcasting system, and converts the first main broadcasting signal into a second main broadcasting signal for local broadcasting. The local broadcasting service providing device generates a second local broadcasting signal by encoding the first local broadcasting signal to be broadcast, hierarchically modulates the second main broadcasting signal and the second local broadcasting signal, and transmits the signals. Accordingly, the local broadcasting service providing device provides compatibility with terrestrial digital multimedia broadcasting and a local broadcasting service in a specific area to thus provide convenience to the user.
