Abstract (en)

[origin: EP2324893A1] The system has an instant game based on the purchase by a player of a game medium (1) i.e. game ticket, which bears results information for the instant game, where the information is accessible to the player after removing a mask and reveals itself to be either winning or losing. The winning result information in the instant game indicates to the player either the direct winnings on the instant game, or the right to participate in an instant lottery game accessible via an instant and automatic lottery computer server unit.
