Abstract (en)

[origin: EP2325010A2] The method involves measuring a printed material by a measuring device (17) inline to a printing process at printer speed or online to the printing process not in the printer speed so as to detect a characteristic of the material. Another characteristic of the printed material is determined based on the former characteristic by access to a database (19) or by access to a model (20), where the latter characteristic of the material is not detected by the measuring device so as to make the characteristics to be accessible to the printing process.
