Abstract (en)  
[origin: EP2325045A1] The invention relates to a lifting device for a vehicle, in which vehicle (30) there is a load space (12), a cab (16) for the driver, as well as the elongated chassis (11) of the vehicle (30) in the centre under the load space (12), and in which the lifting device (14) has an operating position and a transport position. The lifting device (14) includes - hoist attachments (13) comprising a column structure (23) attached to the chassis (11) of the vehicle, between the cab (16) and the load space (12), - a hoist base (17) arranged to be attached to the upper end of the hoist attachments (13), located at least partly on top of the cab (16), - a set of booms (34) supported on the hoist base (17), for lifting a load into the load space (12), and - a swivel base (17.3) with rotary operating devices, for rotating the set of booms (34). The said set of booms (34) is arranged to be folded transversely, in order to fit the lifting device (14) into the transport position.
