Abstract (en)

[origin: EP2325549A1] The reflector has a round blank made of aluminum sheet that is anodized on reflecting side. Star-shaped strip-like fingers (2) protrude downward from a center section (1) of the round blank, where the fingers are bent to a reflector form. Longitudinal edges of the fingers are arranged in an overlapping manner. Adjacent fingers are connected with each other by fasteners (3) e.g. screw fasteners, plug fasteners, and locking fasteners, that are riveted or welded, where the fasteners and the connection are provided at a center section of a turned away end region of the fingers.
