Abstract (en)
[origin: WO2010035085A2] What is described is a stick handle for umbrellas, comprising a substantially L-shaped end section. According to the invention, the stick handle is provided with a hinge device for allowing the stick handle to pivot to a plurality of positions by at least 180 degrees in relation to the stick. The stick handle is designed as a shoulder support or neck guide comprising two internally guided hangers (14, 24) and is equipped with an internally guided telescopic rod and clamping means for vertical stabilization at the body of the user. The hangers and the telescopic rod are integrated into the stick handle and are completely accommodated in the stick handle and hardly recognizable when not in use.
