Abstract (en)
[origin: WO2010010013A1] The invention relates to a rinsing method for a water-conveying domestic appliance, in particular a dishwashing machine, comprising a drying device (22) containing a reversible dehydratable desiccant, wherein in at least one partial program step (R) of a first rinsing, rinse fluid is heated to a first temperature (TR1) in a first operating mode (I). According to the invention, after a predefined number of rinsings done in the first operating mode (I) and/or as a function of process parameters of prior rinsings, at least one rinsing is done in a second operating mode (II) while the rinse fluid is heated to a second temperature (TR2) that is higher than the first temperature (TR1).
