Abstract (en)
[origin: WO2010020456A1] The invention relates to a power tool having a machine housing (12a-e) and a ventilation unit (14a-e) which is provided for cooling a motor unit (16a-e) and/or an electronics unit (18a-e) encased by a machine housing (12a-e), the cooling being accomplished by means of suctioning a cooling air flow (20a-e), and which has a deflection unit (22a-e). The invention provides that the deflection unit (22a-e) has at least one deflection channel (24a-e) that is provided for separating contaminant particles (26a-e) and air (28a-e) of the cooling air flow (20a-e) by means of a deflecting of the cooling air flow (20a-e).
