Abstract (en)
[origin: WO2010031553A1] The invention relates to a frame press having a plurality of press frames (1) arranged one after the other, wherein at least one stationary press plate (2) is present and furthermore a press plate (2) is provided which is loaded by means of working cylinder piston arrangements (3) and which can be moved against the stationary press plate (2). On two opposite outer sides (8) of the press, at least two guide columns (5) arranged at a distance to each other are provided, respectively, and each guide column (5) is guided through at least one associated guide opening or through at least one associated guide channel (6) when the press plate (4) which can be moved is moved.
