Abstract (en)
[origin: GB2463881A] The container (300) comprises a rectangular base portion 310; and first and second pairs of opposing side walls 320a, 320b and 330a, 330b, respectively, extending from the perimeter of the base portion and defining an enclosed volume therebetween. The upper portion 305 of the first and second pair of opposing side walls are foldable to form the container into a substantially cuboid shaped enclosure when in the closed configuration, via a gusset end arrangement where the upper portions of the first pair of side walls 320a, 320b each comprise a square section 365 having fold lines 350a, 350b (150a, 150b, Fig. 1) extending between a centre point 366 (166, Fig. 1) and opposing lower corners 367a, 367b (167a, 167b, Fig.1) of the square section. Integral handles (210, Fig.2) may be formed on the second pair of side walls (220a, 220b, Fig.2), or alternatively a handle 370 may extend from one of the second pair of side walls 330b and, in use, be threaded through a slot (380, Fig.4) on the other of the second pair of side walls 330a. The upper portion 305 may be reinforcing layer.
