Abstract (en)  
[origin: WO2010031422A1] The invention relates to an adhesive tape application device (1) for applying an adhesive tape segment (3) to an object (2), wherein the adhesive tape application device (1) is designed for pulling an adhesive tape end (12) from an adhesive tape store (7) by a relative motion of a displaceable segment (4, 13) and a stationary segment (5) on the object, and for placing said end on the object (2) as an adhesive tape segment (3), wherein the application device (9) is designed and/or disposed for pressing the adhesive tape segment (3) onto the object (2) in an application position of the application device (9), wherein the application device (9) is designed and/or disposed for performing a superimposed rotating and/or pivoting-linear motion in the adhesive tape application device (1).
