Abstract (en)
[origin: WO2010034417A1] The invention relates to a molded brick, particularly made of concrete, for laying ground coverings (10, 30), wherein the molded brick (11, 12, 31, 32, 33) comprises an upper side (13), which is delimited in the transition to the upright lateral surfaces (15, 16, 17, 18) by a side edge (20) surrounding the upper side (13). According to the invention, the course of the side edge (20) is designed at least regionally in a curved manner and relates to a mathematical function, wherein the course of the side edge (20) preferably corresponds to the function $(x) = a \cdot \ln(x) + b$ at least regionally.
