Abstract (en)

[origin: WO2010015544A1] The present invention relates to a unit for adjusting at least one timepiece dial (2) comprising at least one adjustment button (3) with at least two positions, including an adjustment position in which it is capable of adjusting the dial (2) and an inactive position, the unit being characterized in that it comprises means (4) for ejecting the adjustment button (3) from the inactive position to the adjustment position, and control means for actuating locking means (6) designed to lock the adjustment button (3) in an inactive position. The present invention is applicable to any type of timepiece requiring adjustment means and in particular to watches.
