Abstract (en)  
[origin: WO2010023231A1] Method for operating an electronic sound generating device in which different sound sequences (acoustic output data) (22) for controlling the sound generation device and rules (control commands) (18) for selecting and/or modifying the sound sequences (22) as a function of input signals provided by external sensors are stored, and the sound generation device then selects and/or changes sound sequences (22) depending on the current input data provided by the external sensors and on the rules (18) and then plays the sequences.
