Abstract (en)
A slide assembly with an adjustment device (16) includes a first slide member (10), a second slide member (12), a guiding member (14), an adjusting base (42) and a pivot member (44). The first slide member (10) has a first panel (18) and a second panel (20). The second slide member (12) is movable relative to the first slide member (10) in a longitudinal direction. The guiding member (14) is mounted on the first panel (18) and includes an accommodation room (36). The accommodation room (36) has a lateral hole (38). The adjusting base (42) includes a board (46), a protruding member (50), a hole (52) defined through the board (46) and eccentrically through the protruding member (50), and an adjusting portion (54). One portion of the board (46) is in contact with the second panel (20) of the first slide member (10). The protruding member (50) leans against an inner wall of the accommodation room (36). By adjusting the adjusting base (42), the guiding member (14) can be moved by the protruding member (50) relative to the second slide member (12).
