Abstract (en)

[origin: EP2327828A1] According to the invention, a heater 70 and a clothes drying machine 100 using the same are provided. The clothes drying machine 100 includes a cabinet 10, a drum 30 mounted in the cabinet 10 for containing clothes to be dried, an air duct 60 in communication with the drum 30 to enable an air flow to pass through and into the drum for drying the clothes, and a heater 70 provided with a baffle 711 to disturb the air flow passing by to produce a turbulent flow. With the inventive structure, hot air about to enter the drum 30 may be mixed completely, so that heat exchange performance of the hot air is improved.
