Abstract (en)

[origin: EP2327848A2] The device (1) has a spring spatula retainer (3) rotatably mounted on a base frame (2) around a horizontal axis (4) and locked in an operating end point. A spring spatula (14) is interchangeably attached to the retainer. The base frame includes two U-shaped supporting elements (5) that are arranged in parallel, connected through retention struts (6) and spaced from each other. The retention struts are removably mounted on the supporting elements, and the retainer is mounted between the struts. The spring spatula is clamped between two clamping elements (12) of the retainer. An independent claim is also included for a method for producing a grouting.
