Abstract (en)

[origin: WO2010018302A1] The invention relates to a method for making paper, in which method a layer of surface treating agent is formed onto the surface of the base paper. A roll is used for applying the surface treating agent, which roll has in its cylindrical outer jacket recesses or pores that are filled with the surface treating agent, and the surface treating agent is transferred from the recesses or pores of said roll directly onto the surface of the paper in such a manner that the surface treating agent forms a layer of the surface treating agent onto the surface of the paper.
